ABSTRACT

We present a novel tokenomic framework in which long-term value accrues entirely from conviction, vibes, and the repeated assertion of confidence, independent of fundamentals, utility, or any disclosed information whatsoever. Prior work on rug-pull dynamics establishes that market participants reliably respond to confident claims; we extend this result to its logical limit by removing the claims and retaining only the confidence. Across $n = 1$ observations we find that the line, when observed with sufficient belief, goes up. Our method is fully reproducible provided the reader does not attempt to check it. We release no supplementary data, as none was generated. Trust me, bro.

Keywords: conviction · vibes · green candles · the moon · diamond hands · not financial advice

1 Introduction

For years, memecoin research has pursued a single elusive quantity: a utility that justifies the valuation. This paper abandons that search. We observe that the utility is that you stopped asking.

Our contribution is to make, in writing, exactly one promise: that we will make no promises of return. This is the one claim every rug declines to omit, and the one we decline to make.

2 Related Work

The field is dominated by the seminal "trust me bro" tradition (Everyone, in the group chat, repeatedly). Competing frameworks propose whitepapers, roadmaps, and audits. We find these approaches over-engineered. There is no whitepaper. There was never a whitepaper. The document you are reading is not it.

ALGORITHM 1 — THE COMPLETE METHODOLOGY

1. Buy the token.
2. Trust me, bro.

There is no step 3. A reviewer requesting a step 3 is to be gently mocked (Commandment V).

3 Technical Analysis

We submit Figure 1 as our complete empirical evidence base. The analysis was independently reviewed by the corresponding author, who is extremely confident.

Figure 1. Comprehensive technical analysis of \$TMB. The line goes up. Error bars were omitted because they were not confident enough. $p < \text{trust me}$.

4 Theoretical Results

Let V denote value, C conviction, and E the available evidence. We derive the governing relation and evaluate it at the project's operating point.

$$V = \frac{C \cdot \text{vibes}}{E}$$

As $E \rightarrow 0$, $V \rightarrow \infty$. In practice, $V \rightarrow \text{bro}$. ■

5 Limitations

We have absolutely no evidence. This is the first and last fully honest sentence in the document, and we are proud of it. Results may not replicate, generalize, or occur.

6 Conclusion

The Oracle has seen the end. He cannot describe it. He has no data, no roadmap, and no second source. He remains, as ever, extremely confident. Trust the process, bro.

DATA AVAILABILITY

No data was generated or analyzed in this study. There was never any data.

COMPETING INTERESTS

The corresponding author is extremely long and will not elaborate.

FUNDING

Trust me, bro.

AUTHOR CONTRIBUTIONS

The Analyst did all the work. He was ignored. The Oracle pointed at the moon.
